

## biogeography and taxonomy of honeybees

Thu, 06 Dec 2018 10:11:00 GMT biogeography and taxonomy of honeybees pdf - A honey bee (or honeybee) is a eusocial, flying insect within the genus *Apis* of the bee clade. They are known for construction of perennial, colonial nests from wax, for the large size of their colonies, and for their surplus production and storage of honey, distinguishing their hives as a prized foraging target of many animals, including honey badgers, bears and human hunter-gatherers.

Wed, 05 Dec 2018 03:31:00 GMT Honey bee - Wikipedia - The western honey bee or European honey bee (*Apis mellifera*) is the most common of the 7â€“12 species of honey bee worldwide. The genus name *Apis* is Latin for "bee", and *mellifera* is the Latin for "honey-bearing", referring to the species' production of honey.. Like all honey bees, the western honey bee is eusocial, creating colonies with a single fertile female (or "queen"), many normally non ...

Tue, 04 Dec 2018 16:54:00 GMT Western honey bee - Wikipedia - Dense growth of invasive alien plants dry out water catchment drops the water levels in rivers and increases fire risk. River banks and surrounding grasslands become erosion-prone, meaning the water that does make it into the river is sediment-laden and of poor quality. Wed,
