Fri, 07 Dec 2018 18:38:00 GMT bipolar transistor cookbook part 5 pdf - 7400 series parts were constructed using bipolar transistors, forming what is referred to as transistor logic or TTL. Newer series, more or less compatible in function and logic level with the original parts, use CMOS technology or a combination of the two. Originally the bipolar circuits provided higher speed but consumed more power than the competing 4000 series of CMOS devices. Tue, 13 Jun 2017 23:58:00 GMT 7400-series integrated circuits - Wikipedia - Transistor logic (TTL) is a logic family built from bipolar junction transistors. Its name signifies that transistors perform both the logic function (the first "transistor") and the amplifying function (the second "transistor"); it is the same naming convention used in resistor logic (RTL) and diode logic (DTL). ... Circuit idea: Using a Bipolar Junction Transistor (BJT) to create a "bottleneck" for the current flow in a circuit branch. Sat, 08 Dec 2018 15:45:00 GMT Circuit Idea/Simplest Transistor

Current Source ... - The simple but complex current mirror. At first sight, the current mirror looks a simple bare circuit (Fig. 1); but actually, it is an odd, strange and exotic circuit that is never explained (there are only some guessworks).
