These theories are usually studied in the context of real and complex numbers and functions. Analysis evolved from calculus, which involves the elementary concepts and techniques of analysis. In a suitable coordinate system, a hyperbolic paraboloid can be represented by the equation: $z = \frac{y^2}{a^2} - \frac{x^2}{b^2}$. In this position, the hyperbolic paraboloid opens downward along the x-axis and upward along the y-axis (that is, the parabola in the plane $x = 0$ opens upward and the parabola in ...
