Prostate specific antigen (PSA) is a protein produced primarily by cells in the prostate, a small gland that encircles the urethra in males and produces a fluid that makes up part of semen. Most of the PSA that the prostate produces is released into this fluid, but small amounts of it are also released into the bloodstream.

Because each person has two copies of the MTHFR gene, people can inherit one copy of a MTHFR gene variant or two copies of it (one from each parent). People who inherit two copies of C677T have a higher risk for having a child with a neural tube defect. Having two C677T variants and elevated homocysteine levels may cause a slightly higher risk for blood clots.
