Root shock is a condition mirrored at different levels of life. At the individual level, root shock is the emotional trauma a person experiences when his or her environment is devastated, such as in events of natural disaster or military conflict.

### ROOT SHOCK

A: "root" is the name of the user who can control everything on the entire computer. We call this the "super user." To become root, first you must open a terminal. Then, you type: `su -` Note that the "-" is very important -- it sets things so that you have easy access to all the commands on the computer.

### The Fedora Basics FAQ

About Unix `sudo` and `su` commands. The Unix commands `sudo` and `su` allow access to other commands as a different user.. The `sudo` command. The `sudo` command allows you to run programs with the security privileges of another user (by default, as the superuser). It prompts you for your personal password and confirms your request to execute a command by checking a file, called `sudoers`, which the system ...

### About Unix sudo and su commands - Knowledge base

In Scenario 1, a brute force attacker hacks your account with 100% certainty, if he can do  $62^9$  attempts in that time.. In Scenario 2, if he can do only  $(62^9)/2$  attempts in half the time (three months), he'll hack the account with 50% certainty. In the second half, he'll get another chance with 50% certainty. So statistically, he'll hack the account with 75% certainty.
