1. Introduction. The NO_x is produced at a great extent, due to the high local temperatures found in Diesel engines which are highly dependent on the initial rise of heat release. In addition, soot production and oxidation are both dependent on the mixing rate and local flame temperatures. The injection velocity is one of the most influential parameters on the factors (which are mentioned before ...

Effects of injection timing, before and after top dead ...

Experimental optical and thermal tests were carried out in a constant-volume combustion chamber and a single cylinder gasoline direct injection (GDI) engine to obtain a comprehensive understanding of the effects of spark plug electrode gap on flame kernel development, engine performance, and emissions.

Impact of spark plug gap on flame kernel propagation and ...
