Numerical analysis is the study of algorithms that use numerical approximation (as opposed to symbolic manipulations) for the problems of mathematical analysis (as distinguished from discrete mathematics). Numerical analysis naturally finds application in all fields of engineering and the physical sciences, but in the 21st century also the life sciences, social sciences, medicine, business and ...

There are two classes of solution, called the Bessel function of the first kind and Bessel function of the second kind. (A Bessel function of the third kind, more commonly called a Hankel function, is a special combination of the first and second kinds.) Several related functions are also defined by slightly modifying the defining equations.

A function is a relation that uniquely associates members of one set with members of another set. More formally, a function from A to B is an object f such that every a in A is uniquely associated with an object $f(a)$ in B . A function is therefore a many-to-one (or sometimes one-to-one) relation. The set A of values at which a function is defined is called its domain, while the set $f(A)$ subset ...

In 1999 Time Magazine listed Kurt Gödel as one of the most influential mathematicians of the 20th century. As a colleague of Albert Einstein, Gödel and Einstein were able to converse on equal terms on Einstein's theory of Relativity - Gödel once producing a novel solution to Einstein's field equations that caused Einstein to express concerns about his own theory.
