photography is the use of  
camera movements that  
change the orientation  
and/or position of the lens  
with respect to the film or  
image sensor on cameras..  
Sometimes the term is used  
when the large depth of  
field is simulated with  
digital post-processing; the  
name may derive from a  
perspective control lens (or  
tiltâ€œshift lens) normally  
required when the effect is  
produced optically.
