All marine inboard engines have exhaust risers. The exhaust riser has two functions: (1) to keep water from backing up into the engine through the exhaust piping and, (2) it serves as the device that introduces cooling water into the exhaust exit piping system. If the riser fails to accomplish either of those jobs successfully, the end result is the arrival of Uncle Big Bill on the scene.

Oh, what a boring subject, right? Yeah, I agree, reading about bilge pumps is not too thrilling. But this is a subject which I've been harping on for a long time, apparently without a lot of success based on the continuing and overwhelmingly casual attitude that boat owners have for their bilge pumping systems.
