John Deere Tractors Information - SSB Tractor Forum

A steam engine is a heat engine that performs mechanical work using steam as its working fluid. The steam engine uses the force produced by steam pressure to push a piston back and forth inside a cylinder. This pushing force is transformed, by a connecting rod and flywheel, into rotational force for work. The term "steam engine" is generally applied only to reciprocating engines as just ...

Steam engine - Wikipedia

An internal combustion engine (ICE) is a heat engine where the combustion of a fuel occurs with an oxidizer (usually air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.

I just noticed a typo in my response to you that may cause confusion. In the sentence - - The backpressure valve may be "set" to a specific pressure but it would make more sense to have it just compare the pressures on the feed pump outlet and the dosing pump outlet and NOW allow backflow into the dosing pump.
