My 2000 Saab 9-3, after a great trip to Vermont, now cranks, but won't start. Sounds like it almost wants to, but won't. What's a good first step to try to get it going? It's got 172,000 and I just got it last month. Could it possibly just need new plugs, or a new fuel filter?

I found all the resources with instructions on replacing the battery in the alarm module. I removed mine from my M04 9-5 but am a bit puzzled on how to open this thing. They used screws on earlier models but the newer ones are sealed. I tried scoring the edges with a knife but am not getting anywhere in opening it. Any suggestions besides brute force and breaking things?
