In the mature stage of a thunderstorm, the warmed air continues to rise until it reaches an area of warmer air and can rise no farther. Often this 'cap' is the tropopause. The air is instead forced to spread out, giving the storm a characteristic anvil shape. The resulting cloud is called cumulonimbus incus. The water droplets coalesce into larger and heavier droplets and freeze to become ice ...

When people speak of weather control and cloud seeding, many minds turn to conspiracies and dark corners of the world's governments looking to cripple their enemies with a flood, hurricane, or both. And, as limited as it is, there is some documentation showing that government departments have at least looked at the possibility of such environmentally orientated weapons.
